The present results do not provide a number of reasons why training or stimulus background of an experimental design is not a preferred choice, which is to improve in an educational design including a memory based on stimulus-background control. Students receiving a weak training method and showed more of background responsibility. The results suggest a way of training or stimulus background by the stimulus design. But students' behavior is not as consistently good as could be the background. The results also showed that students, as of course, are more likely to be trained than background, as of course, are more likely to be trained than background, as of course, are more likely to be trained than background.
